Vision

W

Way/No Way

X, Y, Z

Notes:

1. The words put forward as keywords here are presented alphabetically. However, varying numbers of words were suggested by different participants. In some cases, words put forward by a participant clearly form a cluster (e.g. words related to a child's developing worldview, at least in senses in which the words selected most interact with other words proposed by the same person). Reflecting the 'thesaurus' as well as 'dictionary' perspective of keyword analysis, it might be more instructive to list such words in semantic clusters, or linked to the person proposing them. Implications that follow from such alternative modes of presentation merit further exploration (e.g. as regards how far keyword selection reflects subjective worldview or engagement in a particular area of work or other activity).

2. The proposals listed here were made without reference to existing keyword lists, including Williams's own selection of keywords. Some words already appear in *Keywords*, for example (in some cases under a different headword, such as **progressive** rather than **progress**). Some words overlap with proposals made in the Keywords Project list of proposed words 2008/9 (e.g. **academic**, **celebrity**, and **excellence**).

3. Some proposals test a boundary between keyword and more ephemeral buzzword (e.g. **awesomeize**)
